Fund Information	Particulars	Fund Manager Comment
Fund type	Open-End Fund	<p>Global economic recovery continued in July with lockdowns continuing to ease in developed markets along with speedier vaccine rollouts globally which has improved the optimism on return to normality compared to the beginning of the year. However, caution remains with the spread of the delta variant that may delay the overall recovery timeline. Gradual opening of the economies in line with the vaccine rollout could lead to economic reflation with stronger demand levels.</p> <p>During the month US 10-year treasury rate ended lower at 1.22% from 1.47% in June mainly on the concerns over economic slowdown consequent to the new variant. In general, a higher 10-year US Treasury level is predicted as a consequence of the expected inflation driven by the continuous US/global money supply that would have an impact beyond reflation. However, this expectation is weighed down by the Fed official's negative comments on inflation being transitory. US and other major central banks continue to support the respective economies with ongoing stimulus. However as of late a hawkish view has emerged from the US Fed with regards to tapering of the ongoing asset purchases which is noteworthy and would lead to elevation of treasury yields</p> <p>Regional credits ended positive during the month with the benchmark rates rallying. Brent ended higher at USD 76.33 from USD 75.13 as of previous month. Elevation of energy price levels is mainly driven by the expected increase in activity following the vaccine rollout. Regional IG and HY space still appear favorable compared to the global counterparts and will attract flows from yield seeking investors.</p> <p>As of July 2021, QNB Debt Fund held 24 holdings with a long term gross yield of c. 3.2 % p.a and duration of c. 3.3 Years.</p>
